

THERMAL CONDUCTIVE SILICONE COMPOSITION

## Abstract

The present invention relates to a thermal conductive silicone composition ~~comprising~~containing a siloxane ~~containing~~which contains a hydrolytic group represented by the formula (1):

where:

$\text{R}^1$  is a group containing an ~~alkoxysiloxy~~alkoxysilyl group having 1 to 4 carbon atoms,

$\text{R}^2$  is a ~~siloxane~~siloxyl represented by the following formula (2) or a monovalent hydrocarbon group having 6 to 18 carbon atoms,

$\text{X}$  is a divalent hydrocarbon group having 2 to 10 carbon atoms,

$a$  and  $b$  are integers of 1 or more,

$c$  is an integer of 0 or more,

the sum of  $a + b + c$  is an integer of 4 or more,

$\text{R}^3$  is a monovalent hydrocarbon group having 1 to 6 carbon atoms or a hydrogen atom, provided that  $\text{R}^3$ s may be the same as or different from each other;

$\text{R}^4$  is a monovalent hydrocarbon group having 1 to 12 carbon atoms,

$\text{Y}$  is a group selected from a methyl group, a vinyl group and  $\text{R}^1$ , and

$d$  is an integer of 2 to 500.
